Person

Adriana G. Bus is an emeritus professor of Leiden University, Netherlands; professor at University of Stavanger, Norway; and honorary professor at ELTE Eötvös Loránd University, Budapest, Hungary. Her research focuses on how we can support young children's transition to literacy. I am especially interested in the role of book reading and how an internet environment changes book reading and other literary experiences.

Talk

In my talk, I will explore how integrating technology into digital picture books can offer young children valuable guidance, enhancing their engagement with stories while increasing both their reading enjoyment and their ability to learn from books.
